

Green Driving Code

Did you know the way you drive your a Green Cab can reduce the amount of CO2 you emit - and help to reduce your impact on global warming? It can also save you money - fuel consumption can vary by up to 45% on the same route, while reducing accidents.

Follow The Green Cab Driving Code and help us drive for a greener future.

- 1. Drive Smoothly**
Try to avoid harsh acceleration and braking - pulling away too fast can use up 60% more fuel
- 2. Change Gears Efficiently**
Changing gear at 1,500 to 2,500 rpm can save up to 15% on fuel - and reduce emissions by the same amount
- 3. Be aware & take defensive action**
Look ahead and anticipate road conditions and other people's actions - this reduces the need for hard braking and acceleration, and so will help you drive more efficiently & safely
- 4. Don't Rev**
Avoid revving the engine unnecessarily - this wastes fuel and increases harmful emissions
- 5. Limit Your Speed**
Observe the speed limits - by driving fast you increase the emissions from the vehicle and optimise your fuel consumption - while avoiding speeding fines & accidents
- 6. Know where you are going to**
Plan your journeys by getting exact address and familiarize yourself with directions to avoid getting lost - you'll have a more relaxing journey and waste less fuel - it is also a poor reflection on The Green Cab if you do not know where you are going to!
- 7. Idling in Traffic Jams**
If stuck in a traffic jam for more than a couple of minutes, turn off the engine to cut exhaust emissions and conserve fuel
- 8. Keep Your Cool**
Using air vents rather than open windows reduces fuel by 4%, while air conditioning can increase fuel consumption by up to 2 litres per 100km; only use aircon when really necessary and switch it off an regular intervals
- 9. Travel Light**
Do not over-fill the fuel tank with petrol as this ads unnecessary weight
- 10. Tune-up**
Service vehicle regularly to keep it running optimally
- 11. Hyper-miling is hip**
Bring your vehicle slowly up to speed as try to maintain a smooth cruising speed by using the accelerator as little as possible
